 **Guna**
healthy lifestyle

Thanks to the most advanced research on **exosomes**, **Guna** opens new horizons in the science of nutrition.

Research on exosome micro-vesicles has led to the discovery of important biological complexes that have revolutionised our knowledge of how cells communicate and interact with each other.

Inspired by this scientific cutting-edge research, the **Exoguna Line** broadens the frontiers of food supplementation through specific formulations designed to **promote the biological vitality of each body district**.

Dermoguna – Health and beauty for the skin

The health and beauty of skin, nails and hair are key indicators of our state of wellness. The **skin** is like a shield that protects the body from UV rays, cold, temperature changes, wind, saltiness, pathogens, and pollutants.

Despite its continuous regeneration process, the strength and youthfulness of skin, hair and nails gradually diminish over the years due to the physiological decrease of collagen, elastin, water, and other nutrients. Embracing a healthy lifestyle, along with a balanced diet, is undoubtedly the first step towards the beauty and wellness of our skin.

Dermoguna is the food supplement designed to preserve the **biological vitality** of the **skin**, by nourishing the connective tissue, skin, nails, and hair. It also protects against the negative effects of oxidative stress.

Dermoguna – The ingredients

- Freeze-dried porcine **Dermacollagen**: an exclusive and certified component, which is the result of Guna's latest nutritional research. Dermacollagen contains essential nutritional elements such as proteins, amino acids, specific vitamins, and nucleic acids, useful to **promote the skin renewal process**.
- **Horsetail** (*Equisetum arvense* L., aerial parts): a plant with high silicon content, an essential mineral for the normal development of connective tissue and elastin. It is found in large quantities in the skin, nails and hair. Horsetail supports **connective tissue trophism and the wellbeing of nails and hair**.
- **Vitamin C**: contributes to **normal collagen formation**.
- **Vitamins C, E, B2** help **protect cells against oxidative stress**.
- **Vitamin B2** and **Niacin** contribute to the maintenance of **normal skin** and to reduce tiredness and fatigue.
